#6 Set Theory and Proofs

! In this section we will go over **Sets** by means of logical definitions and mathematical proofs.

Definitions

Set:
$$A = \{x \in E : P(x)\}$$
 or $A = \{x \in E \mid P(x)\}$

Subset:
$$A \subseteq B \iff \{ \forall x, \ x \in A \Rightarrow x \in B \}$$

 $A \nsubseteq B \iff \{ \exists x : x \in A \land x \notin B \}$

<u>Proper Subset:</u> $A \subset B \iff A \subseteq B \land \{\exists x \in B: x \notin A\}$

Proving $A \subseteq B$ (Element Method)

- 1. Let $x \in A$
- 2. \Rightarrow Use properties of being an element of A, try to reach properties of being an element of B.
- $3. \implies x \in B$ concluded.

Direct proof...

To Prove that a set is empty

- 1. Assume that the set is not empty $(A \neq \emptyset)$
- 2. Try to reach to a contradiction

Proof by contradiction...

Example

• $A = \{m \in \mathbb{Z} \mid m = 6r + 12, \exists r \in \mathbb{Z}\}$ and $B = \{n \in \mathbb{Z} \mid n = 3s, \exists s \in \mathbb{Z}\}$ given. Show that $A \subseteq B$ and $B \not\subseteq A$.

Equality of Sets

$$A = B \iff A \subseteq B \land B \subseteq A$$

To prove that A = B:

- 1. (\subseteq): Prove $A \subseteq B$.
- 2. (⊇): Prove $B \subseteq A$.

Biconditional proof...

Example

- A = $\{x \in \mathbb{Z} \mid m = 6k + 4, \exists k \in \mathbb{Z}\}$ B = $\{y \in \mathbb{Z} \mid y = 18m - 2, \exists m \in \mathbb{Z}\}$ C = $\{z \in \mathbb{Z} \mid z = 18n + 16, \exists n \in \mathbb{Z}\}$ given.
- $A \subseteq B$? $B \subseteq A$? B = C ?

Definitions Related to Sets

- 1. Venn Schemas
- 2. Sets of Numbers
- 3. Reel Number Intervals

Operations on Sets

Union: $A \cup B = \{x \in E \mid x \in A \lor x \in B\}$

Intersection: $A \cap B = \{x \in E \mid x \in A \land x \in B\}$

Difference: $A - B = \{x \in E \mid x \in A \land x \notin B\}$

Complement: $A^C = \{x \in E \mid x \notin A\}$

Operations on Sets

Intersection and Union of More Than One Sets:

Union:
$$\bigcup_{i=1}^{n} A_i = \{x \in E \mid x \in A_i, \exists i \in \{1,...,n\}\}$$

Intersection: $\bigcap_{i=1}^{n} A_i = \{x \in E \mid x \in A_i, \forall i \in \{1,...,n\}\}$

Example

- $A_i = \{x \in R \mid -\frac{1}{i} < x < \frac{1}{i}\}$ defined.
- $\bigcup_{i=1}^{3} A_i = ? \cap_{i=1}^{3} A_i = ?$

Definitions on Sets

<u>Disjoint Sets:</u> A and B are disjoint $\Leftrightarrow A \cap B = \emptyset$

Mutually Disjoint Sets:

 $A_1, A_2, ..., A_n$ are mutually disjoint $\Leftrightarrow A_i \cap A_j = \emptyset, \forall i \neq j$.

Partition:

 $[A_1, A_2, ..., A_n]$ is a partition of $A \Leftrightarrow$ $(A_1, A_2, ..., A_n \text{ are mutually disjoint } \Lambda \cup_{i=1}^n A_i = A)$

Definitions on Sets

Power Set:
$$\wp(A) = \text{Set of all subsets of A}$$

 $|\wp(A)| = 2^n$

Cartesian Product:

$$A \times B = \{(x, y) | x \in A \land y \in B, \forall x \in A, y \in B\}$$

Set Identities

Theorem 6.2.2 Set Identities

Let all sets referred to below be subsets of a universal set U.

Commutative Laws: For all sets A and B,

(a)
$$A \cup B = B \cup A$$
 and (b) $A \cap B = B \cap A$.

Associative Laws: For all sets A, B, and C,

(a)
$$(A \cup B) \cup C = A \cup (B \cup C)$$
 and

(b)
$$(A \cap B) \cap C = A \cap (B \cap C)$$
.

3. Distributive Laws: For all sets, A, B, and C,

(a)
$$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$$
 and

(b)
$$A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$$
.

Identity Laws: For all sets A,

(a)
$$A \cup \emptyset = A$$
 and (b) $A \cap U = A$.

Set Identities

5. Complement Laws:

(a)
$$A \cup A^c = U$$
 and (b) $A \cap A^c = \emptyset$.

6. Double Complement Law: For all sets A,

$$(A^c)^c = A$$
.

7. Idempotent Laws: For all sets A,

(a)
$$A \cup A = A$$
 and (b) $A \cap A = A$.

8. Universal Bound Laws: For all sets A,

(a)
$$A \cup U = U$$
 and (b) $A \cap \emptyset = \emptyset$.

9. De Morgan's Laws: For all sets A and B,

(a)
$$(A \cup B)^c = A^c \cap B^c$$
 and (b) $(A \cap B)^c = A^c \cup B^c$.

Absorption Laws: For all sets A and B,

(a)
$$A \cup (A \cap B) = A$$
 and (b) $A \cap (A \cup B) = A$.

Complements of U and Ø:

(a)
$$U^c = \emptyset$$
 and (b) $\emptyset^c = U$.

Set Difference Law: For all sets A and B,

$$A-B=A\cap B^c$$
.
